

Design, Analyze, Report

Expand the Benefits of iC Site Wide

100% Data Capture

An iC Site License includes connection to iC Data Center™ to automatically capture completed experiments, prepare data into useful formats, and share the files in an organized, central store. Colleagues can easily analyze, share, and discuss results using a common platform which enables a better understanding of the problem under investigation.

Unlimited Office Copies

All users can install and run the latest version of iC software to design, analyze, and report experiments from their office computer. This increases system utilization by allowing other users access to the instruments while the previous user is able to perform experimental analysis and write-up tasks outside the lab.

Use of Advanced Modules

Office copies of iC software can use any of the included D2i (Data to information) modules such as iC Safety™ for iControl™ or Offline Image Analysis with iC Vision™. This is a cost effective way to provide users with enhanced features to obtain critical information from each experiment.

Software Maintenance

iC Site Licenses include all the benefits of Software Care for Instrument and Office copies of iC Software. Stay up-to-date, save money, prevent obsolescence, and ensure compatibility by getting access to the latest software versions as they are released.

iC Site License

An annual iC Site License ensures all users have the same software versions for easy data transfer and knowledge sharing. All scientists, site wide, can install and run iC software to plan, analyze and report experiments, as well as use the latest features and modules available. iC software allows users to fully understand the experiments being studied to make better decisions and complete projects faster.

iC Site License Specifications

iC Site Licenses are available for these applications:

- iC IR™
- iC Raman™
- iControl™
- iControl RC1_e™
- iC FBRM™
- iC PVM™
- iC Vision™
- iControl LabMax™

Having an iC Site License the following softwares and modules are free of charge:

Software	Modules
– iControl Office	– iC Quant™, ConclRT Pro
– iControl RC1 _e Office	– CSM
– iC Data Center™	– Multi-Instrument Control Option
	– iC Safety™, iC Safety for RC1 _e

For the following softwares and modules extra copies are free of charge:

Software	Modules
– iC IR Instrument	– EasyMax HFCal
– iC IR Instrument	– OptiMax HFCal
– iC Raman Instrument	
– iC Vision Instrument	
– iC FBRM Instrument	

What does “extra copies” mean?

To connect an instrument the corresponding software has to be purchased. If the instrument is used on multiple computers, the required additional copies are free of charge.

All other licenses need to be purchased separately.

The differences between having iC Site Licenses and having Software Care alone:

iC Site License	Software Care	
■	■	Access to any new releases for download
■	■	Annual subscription
■		Use of iC Data Center
■		Unlimited installations of Office versions
■		Unlimited use of available D2i modules
■		No internet license activation needed

Frequently Asked Questions

Are iC Site Licenses based on the number of instruments or the number of users?

The cost is based on the number of iC supported instruments owned. An unlimited number of users can access the software from any location.

Do all instruments need to be included in the Site License?

All currently supported instruments for a given technology must be included on the Site License. Not all technologies that are owned must be covered.

What is needed to be eligible for a Site License?

Each system to be covered must be on the latest iC software version available for that instrument. Any needed upgrades are available at a substantial discount if purchased with a new iC Site License.

I already have Software Care on some instruments, can I upgrade to a Site License?

Yes. Any unused months of Software Care already purchased will be credited towards the cost of an iC Site License.

How is software deployed to users?

Each company determines its deployment strategy. The installers can be placed on a shared folder where users can access them or IT departments can handle installations of new products per their procedures. Contact support.msg@mt.com for any specific questions.

Do all new users need to activate licenses on the website?

No. New Office users will only need to import a special Site License file one time per year to enable all covered iC products and modules on their computer. For Instrument copies, a set of activation codes will be provided so users will not need to use the website.

What is the alternative to an iC Site License subscription?

Individual Office and D2i module licenses can be purchased for specific users and covered with Software Care subscriptions.

What is NOT included in a iC Site License?

New copies of iControl Instrument for reactor systems controlled by a touchscreen as well as optional modules that affect real-time data collection (like calorimetry or real-time Image Analysis) are not included in Site Licenses. These licenses must be purchased separately.

What if the subscription is not renewed?

If the Site License is not renewed, Office and module copies will stop working after the expiration date. Instrument copies will still continue to run indefinitely on the latest version that was available when the Site License expired.

What happens to the experiment files if the subscription is not renewed?

If the Site License is not renewed, any experiments that have already been processed by iC Data Center will not be affected, but any future experiments will not be uploaded.
